Construction managers, architects, and civil engineers are working in an environment

of rapidly changing and improving information technologies. This handy manual explores the entire spectrum of IT applications in construction, from traditional computer applications to emerging Web-based and mobile technologies. Information can be applied to firms of all sizes and features suggestions for IT solutions that can be implemented for complex projects as well as small, low cost ventures. Estimating, scheduling, web logs, project web portals, content management systems, document management systems, 4D CAD, mobile and field computing, and wireless computing are all discussed.
