isbn:9780849390678

The fourth edition of a best-seller, this book details the chemistry and technology of petroleum as it has evolved into the twenty-first century. It includes new chapters on recovery of heavy oil and tar sand bitumen; deasphalting and dewaxing processes; analysis, properties, and specifications for petroleum products; environmental aspects of refining; refinery wastes; entry into the environment; environmental analysis; and new developments. This text also features revised and expanded coverage of instability and incompatibility, refinery distillation, thermal cracking, hydrotreating and desulfurization, hydrocracking, as well as hydrogen production.
