isbn:9781554073160

"The latest photos from Hubble's recent discoveries, with fascinating new and updated information." After 17 years, 25,000 astronomical targets and more than 700,000 images, the Hubble Space Telescope (HST) continues to return images and data that amaze astronomers. Within the past few months alone, the Hubble has revealed a gold mine of just-formed star systems in the newborn Universe, provided detailed views of a second red spot emerging on Jupiter, and confirmed that monster black holes lurk at the center of galaxies. This brand new and updated edition features: 80 new full-color

images A new introduction that reveals Hubble's future The data behind Pluto's recent demotion to non-planetary status Hubble's most important and fascinating new discoveries Explanations of how these new discoveries are revising scientific understanding of the Universe. New photographs reveal astonishing and previously unseen details of what once appeared only as gray blurs or dots on a star map. Examples include the Eagle Nebula and the birth of a star; newly formed stars blowing a cavity in the center of the Small Magellanic Cloud; colliding Antennae galaxies; and a massive galaxy just under assembly. Hubble transports readers beyond our solar system to galaxies millions -- even billions -- of light years away. These dramatic, unforgettable new images bring into sharp focus the ways in which the Universe is unfolding in new and astonishing ways.

作者介绍:

罗宾·克洛德
，著名天文学家，英国皇家天文学会和英国星际学会会员，同时也是一位知名作家，著有《The Sky at Night》、《The Illustrated History of NASA》等。

卡罗尔·斯托特，著名天文学家，英国格林尼治皇家天文台台长，天文学及空间科学知名作家，著有30多部著作，并为英国多家天文杂志的专栏作家。
