Traces the history and development of over 75 discoveries, inventions and experiments of the Middle Ages and Renaissance The Middle Ages and the Renaissance were a period of scientific and literary reawakening, where both scientific development and a renewed interest in classical science led to new discoveries, inventions and technologies. During the centuries between 500 and 1600, Europeans rediscovered ancient Greek and Eastern knowledge leading to an awakening of new ideas. In this reference work, Dr. Krebs describes over 75 discoveries of this period and the scientists, physicians, and scholars responsible for them. Individuals such as Leonardo da Vinci, Marco Polo, and Galileo are included, as are entries on the discovery of reconstructive surgery, Stonehenge, eyeglasses, the microscope, and the discovery of smallpox. Part of a unique series spanning from ancient times to the twentieth century, this book explores advancements in science during the Middle Ages and Renaissance. Useful for high school and college students, teachers, and the general public who seek information about discoveries, inventions, and technologies. Part of the Groundbreaking Scientific Experiments, Inventions and Discoveries through the Ages series Contains entries on experiments, discoveries, and individuals
