Anthropological genetics is a field that has been in existence since the 1960s and has been growing within medical schools and academic departments, such as anthropology and human biology, ever since. With the recent developments in DNA

and computer technologies, the field of anthropological genetics has been redefined. This volume deals with the molecular revolution and how DNA markers can provide insight into the processes of evolution, the mapping of genes for complex phenotypes and the reconstruction of the human diaspora. In addition to this, there are explanations of the technological developments and how they affect the fields of forensic anthropology and population studies, alongside the methods of field investigations and their contribution to anthropological genetics. This book brings together leading figures from the field to provide an up-to-date introduction to anthropological genetics, aimed at advanced undergraduates to professionals, in genetics, biology, medicine and anthropology.

作者介绍:

MICHAEL H. CRAWFORD, Director

Laboratory of Biological Anthropology

Dept. of Anthropology

University of Kansas

DEGREES HELD:

B.A. University of Washington-Seattle 1960 Anthropology

M.A. University of Washington-Seattle 1965 Biological Anthro.

Ph.D. University of Washington-Seattle 1967 Biological Anthro. & Genetics
