isbn:9780750669481

Understanding airworthiness is central to maintaining and operating aircraft safely. While no book can replace the published FAR/JAR documentation for airworthiness, this unique guide provides readers with a single reference to understanding and

interpreting the airworthiness requirements of the ICAO (International Civil Aviation Organisation), FAA (the US Federal Aviation Authority) and EASA (European Aircraft Safety Agency). Setting these requirements in a real-world context, the book is an essential contribution to the safety management system of anyone involved in the design, maintenance and operation of aircraft for business or pleasure. It includes topics such as: considerations of airworthiness standards for all classes, including large and small aircraft, rotor craft, gliders and unmanned aircraft; JAR/FAR 21 Type certification of aircraft, engines, and propellers and the type certification process; Parts and appliances approval; Joint certifications and national certifications; Special classes of certificates of airworthiness; and Airworthiness and flight operations. This is the only airworthiness guide available: a real contribution to understanding flight safety. It covers European and US requirements and helps anyone involved in the manufacture, flying and maintenance of aircraft to understand this complex yet essential topic. No aircraft can fly without the correct certificate of airworthiness.

作者介绍:

Former member of the JAA Certification Committee and Director of the Italian RAI-ENAC Type Certification Division

前JAA审定委员会成员，意大利RAI-ENAC型号认定组长
