Now featuring full-color illustrations and a streamlined organization, this classic text is an excellent resource for studying and reviewing human anatomy and function. It offers detailed coverage of each region of the body – the upper and lower regions,

head, and skin – with easy-to-understand explanations and diagrams that clarify important concepts. Bones, muscles, joints nerves, blood supply, viscera, and the nervous system are presented in connection with the upper and lower limb. Color-coded anatomy illustrations and corresponding sections of the book differentiate muscles, tendons, and nerves. Student and lecturer resources, including a complete image bank, are available through the Evolve website. \* Anatomy of the musculoskeletal system is presented in detail, with an emphasis on function. \* Coverage includes bones, muscles, joints, nerves, and blood supply associated with the upper and lower limbs. \* Summary boxes highlight key points within the chapters.
