装帧:Hardcover

isbn:9780521650748

This 2006 book examines the exciting discoveries in the study of marsupials of the last 20 years. These discoveries have led to significant developments in our understanding of this unique group of mammals. The impact of these developments have been such that marsupials are coming to be seen as model organisms in studies of life history evolution, ageing and senescence, sex determination and the development and regeneration of the nervous system. This volume brings together information scattered throughout the primary literature. Coverage includes evolutionary history and management strategies as well as all aspects of basic biology. A complete listing of known species and a comprehensive list of references make this a unique repository of information on this fascinating group of animals.

作者介绍:

Patsy Armati is Associate Professor in the School of Biological Sciences, University of Sydney, Australia.

Chris Dickman is Reader in the Institute of Wildlife Research, School of Biological

Sciences, University of Sydney, Australia.

Ian Hume is Challis Professor in the School of Biological Sciences, University of Sydney, Australia.

Contributors

M. Archer, J. Kirsch, W. Sherwin, J. A. Marshall Graves, G. Shaw, A. Krockenberger, I. D. Hume, J. Nelson, P. Armati, P. Cisternas, C. Dickman, E. Vieira, D. B. Croft, J. Eisenberg, A. Burbidge
