Geomorphology, the discipline which analyzes the history and nature of the earth's

surface, deals with the landforms produced by erosion, weathering, deposition, transport and tectonic processes. In recent decades there have been major developments in the discipline and these are reflected in this major encyclopedia, the first such reference work in the field to be published for thirty-five years. Encyclopedia of Geomorphology has been produced in association with the International Association of Geomorphologists and has a truly international perspective. The entries have been written by an international editorial team of contributors, drawn from over thirty countries, who are all among the leading experts in the discipline. In two volumes the Encyclopedia contains over 640 alphabetically organized entries to provide a comprehensive guide both to specific landforms and to the major types of geomorphological processes that create them. Encyclopedia also demonstrates the major developments that have taken place in recent years in our knowledge of tectonic and climatic changes and in the use of new techniques such as modelling, remote sensing and process measurement. Older concepts, however, are not forgotten and provide an historical perspective on the development of ideas. Both accessible and authoritative, Encyclopedia of Geomorphology is destined to become the definitive resource for students, researchers, and applied practitioners in the field of geomorphology and the cognate disciplines of geography, earth science, sedimentology and environmental science. The Editor-in-Chief, Andrew Goudie, is Professor of Geography in the University of Oxford, and a former Chairman of the British Geomorphological Research Group. He is the Vice-President of the International Association of Geomorphologists. Editor-in-Chief A.S. Goudie, University of Oxford, UK Assistant Editor Jan Burke Consultant Editors Richard Dikau, University of Bonn, Germany Basil G
