著者:Baird, Colin/ Cann, Michael C.

出版者:W H Freeman & Co

出版时间:2004-8

装帧:HRD

isbn:9780716748779

Environmental Chemistry explores the relationship between chemistry and the environment from the chemical viewpoint. It offers balanced coverage of the environmental chemistry of natural systems and can be easily used by students with backgrounds in general chemistry. With the addition of new co-author Michael Cann the third edition incorporates other key features including: new green chemistry sections added to each chapter; a revised structure with shorter chapter sections and descriptive headers throughout, making it a more flexible learning and teaching tool; and two new additional chapters on water chemistry, showing its relevance to the study of plants, animals and the environment.
