Our striking map of the Moon's near side identifies more than 300 features on a new, easy-to-read mosaic image. The Moon is shown with north up, the way it appears in

binoculars. It's also available in a mirror-reversed format for use with telescopes with an odd number of reflections (such as refractors and catadioptrics with star diagonals.) Both are great for use at the telescope too Lunar disk is 10{1/2} inches in diameter.
