isbn:9783540357919

The aim of this book is the integration of human-related design, which satisfies the requirements for safety and human health, into the methodology of design. It embraces numerous practical examples in a systematic collection of solutions which are directly applicable for safety precautions and protective equipments. Mechanical Engineers and practitioners searching for approaches which can be transferred immediately to the specific problem will find the direct way towards their own solution. This is the English translation of the successful German book, currently published in its third edition.
