Asking Questions in Biology is all about scientific discovery. Biology students must be able to analyse data and produce high quality reports, but before this they need to work out exactly what it is they are trying to discover. Asking Questions in Biology begins with the often overlooked (yet crucial) skill of asking the right question, in the right way. It then moves on to present the tools and techniques required to gather data, analyse this data and finally to present this data (either orally or in a formal report).
