isbn:9780470098981

Organic Reactions is a collection of chapters, each devoted to a single reaction or a definitive phase of a reaction of wide applicability, with particular attention given to limitations, interfering influences, effects of structure, and the selection of experimental techniques. Volume 68 includes two chapters on important reactions: Chapter 1 on Contrimerizations of Acetylenic Compounds by Max Malacria, and Chapter 2 on Glycosylation on Polymer Supports by Peter Seeberger Includes tables that contain all possible examples of the reactions under consideration Each reaction is fully referenced to the primary literature
