"A superb handbook on the marvel that is the human body." This new Visual Guide provides the latest scientific information on the human body, using microphotography, advanced medical imaging and annotated illustrations. The book reveals all the intricacy and beauty of the human body and shows the structure and functions of all the systems that make up a human being: Circulatory, respiratory, digestive and

nervous systems Bones, muscles and skin Sensory and digestive processes Amazing workings of the brain and internal organs. Human Body is packed with compelling information on the latest developments in modern medical procedures, reproductive technology, transplants, cosmetic surgery and new prosthetics. "FactFiles" are used throughout for quick reference to intriguing and important topics. The author has created an outstanding and easy-to-access resource to the science of the human body.
