出版者:CRC Press

出版时间:2006-12-19

装帧:Hardcover

isbn:9780849382789

"Lens Design, Fourth Edition" is still the most complete and reliable guide for detailed design information and procedures for a wide range of optical systems. This edition was updated to replace obsolete glass types and now includes several new designs and sections on stabilized systems, the human eye, spectrographic systems, and diffractive systems. Also new to this edition, a new companion CD-ROM offers extensive lens prescription data along with executable ZEMAX files corresponding to figures in the text.
