出版者:University of California Press

出版时间:2001-06-04

装帧:Hardcover

isbn:9780520223936

Many consider Lewis Binford to be the single most influential figure in archaeology in the last half-century. His contributions to the 'New Archaeology' changed the course of

the field, as he argued for the development of a scientifically rigorous framework to guide the excavation and interpretation of the archaeological record. This book, the culmination of Binford's intellectual legacy thus far, presents a detailed description of his methodology and its significance for understanding hunter-gatherer cultures on a global basis. This landmark publication will be an important step in understanding the great process of cultural evolution and will change the way archaeology proceeds as a scientific enterprise. This work provides a major synthesis of an enormous body of cultural and environmental information and offers many original insights into the past. Binford helped pioneer what is now called 'ethnoarchaeology' - the study of living societies to help explain cultural patterns in the archaeological record - and this book is grounded on a detailed analysis of ethnographic data from about 340 historically known hunter-gatherer populations. The methodological framework based on this data will reshape the paradigms through which we understand human culture for years to come.
