isbn:9780761929093

Crime has its own ecosystem. Marcus Felson's innovative new text shows how modern society can reduce this ecosystem and limit its biodiversity. Providing students with a system for thinking about crime, "Crime and Nature" shows clearly how crime draws from the larger ecosystem, how offenders forage for targets and how they depend on one another. Marcus Felson considers how crime feeds off legal activities and shows how crime ecology can help shut off crime opportunities and reduce crime in local areas. With a wealth of examples illustrating the concepts discussed, and the author's clear, enjoyable writing style and willingness to take sometimes controversial stances, this textbook keeps students engaged in this original work. It is accessible for readers at any level and delves well beyond introductory materials. It is a timely addition to the 'crime science' literature and is an innovative resource for students and criminologists alike. Pedagogical features, including summaries, cogent exercises and well-chosen charts and tables, make this an excellent text for courses such as Introduction to Criminology, Sociology of Law, Crime and Biology, Social Problems, Crime Theory and Crime Control and Prevention.
