Psychotropic drugs are pervasive in American culture. The authors in this compilation of essays contend that society has been transformed into an asylum without walls?a ?psychotropia.? With each new definition of a mental ailment, a new cure is offered, increasing the number of inmates in this borderless asylum and blurring the lines between mental health and mental illness. Eight essays probe this issue, with an introduction and conclusion by the editor. The introduction frames the topic in the dehumanized asylums brought to light in 1961 by sociologist Erving Goffman, and in author Marshall McLuhan's warning not to be seduced by the media. Essay topics cover: how psychotropia came to be; drug portrayal in Hollywood; advertising in cyberspace and the postmodern condition; the advertising madness that promotes better living through chemistry; food as medicine; the music culture of psychotropia; children and psychotropic drugs; and stereotypes and manipulation in mass marketing.
