Five years after September 11, a sense of malaise and uncertainty surrounds the so-called war on terror. This volume offers a bold, fresh rethinking of the central challenge in that conflict: the rise of radical Islamism. Mazarr argues that this movement represents the latest in a series of anti-modern political and philosophical rebellions: in its causes, the shape of its ideology, and its social consequences, the movement shares much in common with German fascism, Russian revolutionary doctrines, and Japanese imperialist nationalism. The book builds a model of how anti-modern movements arise and suggests broader truths about the changing character of world politics and the psychological basis of national security in a globalized world. It concludes with a critique of the war on terror as currently pursued and a wide-ranging proposal for a strikingly different approach to the challenge of this latest challenge to modernity.

- Provides a needed insight into the hidden world of international terrorism
- Shows how throughout history there have been other radical movements that challenged modernity
- Makes bold policy recommendations to confront the radical Islamic movement
