Now in its fourth edition, the extremely successful "Community Development" continues to be a definitive guide for community development workers. This useful, practical book contextualises poverty and explains the process of community development, with specific reference to the community development worker's role. Apart from context and process, it details the kinds of skills required by a community development worker, with particular attention being paid to the importance of communication. The book focuses on enabling the development worker to train others, thereby building capacity in the community and working towards breaking the poverty cycle. The authors have been involved in research projects locally and internationally. These projects have included rural development, housing, energy use, local government, training, and culture and medicine.
