In a world where advanced knowledge is widespread and low-cost labor is readily available, U.S. advantages in the marketplace and in science and technology have begun to erode. A comprehensive and coordinated federal effort is urgently needed to bolster U.S. competitiveness and pre-eminence in these areas. This congressionally requested report by a pre-eminent committee makes four recommendations along with 20 implementation actions that federal policy-makers should take to create high-quality jobs and focus new science and technology efforts on meeting the nation's needs, especially in the area of clean, affordable energy: increase America's talent pool by vastly improving K-12 mathematics and science education; sustain and strengthen the nation's commitment to long-term basic research; develop, recruit, and retain top students, scientists, and engineers from both the U.S. and abroad; and, ensure that the United States is the premier place in the world for innovation. Some actions will involve changing existing laws, while others will require financial support that would come from reallocating existing budgets or increasing them. "Rising Above the Gathering Storm" will be of great interest to federal and state government agencies, educators and schools, public decision makers, research sponsors, regulatory analysts, and scholars.

我可能比较保守，觉得数学教育确实很重要。也可能因为是我数学不好，对于所有数学优秀的人有一种崇拜的情结吧。
