To varying extents in developed countries a minority of the population suffers from deprivation. Britain's Labour government in particular has sought to deal with this through the notion of 'social exclusion', and similar ideas have been developed in other countries. This important text explores the various forms of this contemporary economic and social disadvantage and, in particular, investigates its social and spatial causes and the role of space in policies addressing disadvantage. Arranged in three distinct parts, it: introduces contemporary and historical conceptualizations of social exclusion and poverty; analyzes social exclusion's origins by examining the different spheres of disadvantage and their relations; and discusses strategies for overcoming social exclusion, and analyzes policy ideas from across the political spectrum. This book is the first to systematically analyze the role of geography in poverty and social exclusion, and deals with the roles of 'globalization' and localism. Though its main focus is Britain, it investigates similarities and differences in other developed countries. Social exclusion is a subject of considerable interest across the social sciences, and this topical book, international in scope and wide-ranging in content, provides students of planning and urban studies with a valuable source of information.
