Quality Management Exam Review for Radiologic Imaging Sciences is the only text available that is designed specifically as a study tool for the Quality Management examination offered by the ARRT. Containing over 600 questions -- three times the number of questions as the exam -- this text is an excellent assessment and education tool. Each question offers the rationale for each correct answer and each incorrect distractor. This text would make an excellent addition to Quality Management courses being designed with the objective of qualifying graduates for the Quality Management exam.
