The B-2A 'Spirit' was an aircraft conceived to fight the Cold War (1946-1991) but which has proved invaluable to both the 'New World Order' and more recently the

‘War on Terrorism’ . The combination of low-observability, precision strike, range and payload flexibility has made the ‘Spirit’ the weapon of choice when America hits its enemies at the start of a campaign. Spirits have fired the first shots of Operation ‘Allied Force’ over Kosovo and Serbia, as well as operations ‘Enduring Freedom’ (2001-present) and ‘Iraqi Freedom’ (2003-present). Despite the tremendous cost of the aircraft – each unit is literally worth its weight in gold – the B-2 has had an impact on modern warfare which has vastly exceeded this small force of 21 bombers. Developed in utmost secrecy, the B-2’s gestation saw the use of new computer design and manufacturing techniques and ultra-modern synthetic materials making it the most revolutionary aircraft in terms of design and performance. This book examines these incredible aircraft.
