isbn:9781841769745

This book sets out to answer a wide range of modelers' 'how-to' questions. It begins by showing all the things that need to be done to build a first model. Paints, glues, knives and other basic tools are introduced. Then it moves on to the use of accessories and the more specialised tools, such as those made for work with etched metal, are discussed. The book continues with demonstrations of how to build a complex conversion or a complete resin kit as well as more simple scratchbuilding. Everything is

straightforwardly explained and clearly illustrated by numerous photographs of the steps in the various processes and of finished models.
