Many people feel that financial-economic business is an extremely difficult issue and should be left only to professionals. To the contrary, it is actually something that all of us should take up and make part of our common knowledge. Daily life, whether it includes purchasing and sales, managing assets, or investments, the more we understand the changes in the global financial environment, the easier it is for us to learn how to manager our own "monetary furture". In this book, the author takes on a corporate perspective and describes the causes and effects of the situation in easy-to-understand detail. In addition, he also discusses the possible and feasible solutions to the problems. Through the author's description, the readers can clearly and in-depth understand the current situation of each East Asian countries. The author's quantified anlysis can also enhance the reader's grast of the international market place. In terms of developing a long-term strategy to deal with the environment, the author's concepts, such as building an independent wealth-creating system and developing/utilozing computer and communication systems. are not only unique but also visionary, and are something that shouldn't be missed.
