装帧:Hardcover

isbn:9780072953589

Smith/Hashemi's Foundations of Materials Science and Engineering, 4/e provides an

eminently readable and understandable overview of engineering materials for undergraduate students. Chapters have been updated to reflect new topics such as nanotechnology and biotechnology and materials types being used in industry. Through concise explanations, numerous worked-out examples, a wealth of illustrations & photos, and a brand new set of online resources, the new edition of Smith provides the most student-friendly introduction to the science & engineering of materials.

The fourth edition features expanded chapter problem sets with even more Design-Oriented Problems involving materials selection factors. Chapter Openers immediately engage students in each chapter's content through a highlighted, real-world application. Corresponding ancillary supplements are listed at the end of each chapter to allow for easy integration of online and CD-ROM resources into text material.
