The last couple of years have seen big changes in server-side web programming. Now it's the client's turn; Dojo is the toolkit to make it happen and "Mastering Dojo" shows you how. Dojo is a set of client-side JavaScript tools that help you build better web applications. Dojo blurs the line between local, native applications and browser based applications; the browser becomes the user interface platform. 'Modern' browsers

provide an incomplete, inconvenient, and incompatible programming environment, but Dojo eliminates these problems. While there are many JavaScript libraries available, most focus on just one thing (for example, effects libraries, perceived JavaScript omissions, or HTML widgets).Dojo addresses all of these functional areas and many others extensively. In "Mastering Dojo", you'll get the whole story, from basic usage to advanced idioms. "Mastering Dojo" starts out with a fast moving tutorial that will give you techniques that you can start using right away. You'll learn all about Dojo Core - the foundation on which all things Dojo stand. See how you can modularize your project for development and automatically package your release for optimal download performance. You'll also learn how Dojo: augments the core JavaScript library fixes the event system simplifies DOM programming provides a complete class definition facility includes a powerful remote scripting (XHR) framework ...and much more. You'll love using Dojo's HTML user interface control widget system, Dijit. See how to use over 40 widgets, including the rich yet easy-to-use tree and grid controls. Finally, you'll get an in-depth look at how to design and build a single-page, rich Internet application.

read this book, then you will be a dojo guy/girl.

DOJO的入门书,结合下载的Sample code, 比较适合入门.

讲了Dojo的方方面面，还有很深入的技术分析。所以看技术相关的书还是要看创造这一技术的人写的书
