If you think you're well versed in ASP.NET, think again. This exceptional guide gives you a master class in site building with ASP.NET 3.5 and other cutting-edge Microsoft technologies. You learn how to develop rock-solid web portal applications that can

withstand millions of hits every day while surviving scalability and security pressures -- not just for mass-consumer homepages, but also for dashboards that deliver powerful content aggregation for enterprises.

Written by Omar AL Zabir, co-founder and CTO of Pageflakes, "Building a Web 2.0 Portal with ASP.NET 3.5" demonstrates how to develop portals similar to My Yahoo!, iGoogle, and Pageflakes using ASP.NET 3.5, ASP.NET AJAX, Windows Workflow Foundation, LINQ and .NET 3.5. Through the course of the book, AL Zabir builds an open source Ajax-enabled portal prototype (available online at "www.droptthings.com"), and walks you through the design and architectural challenges, advanced Ajax concepts, performance optimization techniques, and server-side scalability problems involved.

You learn how to: Implement a highly decoupled architecture following the popular n-tier, widget-based application modelProvide drag-and-drop functionality, and use ASP.NET 3.5 to build the server-side part of the web layerUse LINQ to build the data access layer, and Windows Workflow Foundation to build the business layer as a collection of workflowsBuild client-side widgets using JavaScript for faster performance and better cachingGet maximum performance out of the ASP.NET AJAX Framework for faster, more dynamic, and scalable sitesBuild a custom web service call handler to overcome shortcomings in ASP.NET AJAX 1.0 for asynchronous, transactional, cache-friendly web servicesOvercome JavaScript performance problems, and help the user interface load faster and be more responsiveSolve scalability and security problems as your site grows from hundreds to millions of usersDeploy and run a high-volume production site while solving software, hardware, hosting, and Internet infrastructure problems"Building a Web 2.0 Portal with ASP.NET 3.5" also presents real-world ASP.NET challenges that the author has solved in building educational and enterprise portals, plus thirteen production disasters common to web applications serving millions of users. If you're ready to build state-of-the art, high-volume web applications, this book has exactly what you need.

书评

第一时间拿到了这本书，Omar，codeproject上的牛人，pageflakes站长，开源项目droptthings的创始人，他的身上有着太多的光环，对技术方向上敏锐的判断，对基础知识深入的理解，这些才能使他走在了这个行当的前沿，在这个行当中，他做的实在太漂亮了。ASP.NET，framewor...
