This global exploration of autism by an award-winning scientist--and father of an autistic child--shows that an apparent "epidemic" signals surprising new promise for better diagnosis and treatment. When anthropologist Richard Grinker's daughter was diagnosed with autism in 1994, it occurred in only about 1 in every 10,000 children. Within ten years, rates had skyrocketed, and the media was declaring autism an epidemic. Unstrange Minds documents Grinker's quest across the globe to discover the surprising truth about why autism is so much more common today. Grinker shows that the identification and treatment of autism depends on culture just as much as on science. Filled with moving stories and informed by the latest science, Unstrange Minds is a powerful testament to a father's quest for the truth.

“这些年我们看到的自闭症越来越多，但是很难说这是因为我们关注的曝光率高了还是

其实他们一直以来都存在，只是我们看不见罢了。”
