This title is a Royal Society of Medicine Book Awards 2005 Winner. "Diseases of the Ocular Fundus" is a comprehensive and very practical approach to all aspects of fundus diseases including retina, vitreous, choroid, tumors of the fundus and optic

nerve disease. The authors provide both the diagnostic framework and offer advice on management options for all diseases the ophthalmologist will encounter. Illustrated in full color throughout with over 1150 photographs (850 in color) and over 180 line drawings, this book provides the reader with an outstanding visual reference. Clinical cases with both pre and post-treatment histories are also included and provide an invaluable guide to patient management. "Diseases of the Ocular Fundus" is a practical approach to the diagnosis and management of ocular fundus diseases and will be an invaluable guide to both the general ophthalmologist, and particularly to ophthalmologists in training. It will also be an excellent source for optometrists in practice and training.
