Since the sixties, musicians have been outspoken and powerful proponents for social change, making them a threat to those eager to maintain the status quo. Typically fond of drugs, they also make easy targets for investigation and exploitation. In this comprehensive look at more than a dozen suspect rock star deaths, conspiracy researcher Alex Constantine delves into the secrets that the record industry, organized crime, and even the FBI and CIA don't want uncovered. Unearthing recent - and successful - assassination plots against Tupac Shakur and The Notorious B.I.G. as well as new information on the tragic deaths of Jimi Hendrix, Jim Morrison, and John Lennon, this long-overdue report offers disturbing evidence that there may be more behind these deaths than accident, psychosis, and indulgence.
