This industry-specific problem-solver was designed especially for those working with OSHA, EPA, and state regulatory compliance in the metal forming and fabricating industries. Perfect for small or large firms, this comprehensive and unique handbook provides essential information on 400 hazardous chemicals commonly used in fabricating and forming shapes from ferrous and nonferrous metals; metal surface preparation; finishing, including electroplating, plating, polishing, anodizing, coloring, and coating. Perfect for your heavily regulated industry segment, this book is packed with all the facts, regulation summaries, safety data, and compliance standards you require. You need no other source--and you'll find no better guide to dealing with every aspect of the hazardous chemicals used in machining and metalworking--than this unique, convenient, and easy-to-use reference.
