装帧:Paperback

isbn:9780813340838

A concise and physically-motivated treatment of the major processes which determine the interaction of intense light waves with plasmas. This new book includes discussions of basic plasma concepts, plasma simulation using particle codes, and laser plasma experiments. It is the most elementary book currently available that successfully blends theory, simulation, and experiment, and presents a clear exposition of the major physical processes involved in laser-plasma interactions.
