This R&D Agenda, Illuminating the Path, provides a coordinated technical vision for government and industrial investments, and ensures that a continued stream of technology and tools enter the hands of analysts and emergency responders.

The R&D Agenda presents recommendations to advance the state of the art in the major visual analytics research areas:

* The science of analytical reasoning

* Visual representations and interaction techniques

* Data representations and transformations

* Production, presentation, and dissemination.

The R&D Agenda also includes recommendations to accelerate the ability to move the most promising research into practice and set the stage for an enduring visual analytics research community through a combination of education and research collaboration.
