Life on earth will come to an end. It's just a matter of when. "Global Catastrophes: A Very Short Introduction" focuses on the many potential catastrophes facing our planet and our species in the future, and looks at both the probability of these events happening and our chances of survival. Coverage extends from discussion of the likely consequences of the current global warming to the inevitable destruction of the earth in the far future, when it is enveloped by our giant, bloated sun. In between, other 'end of the world scenarios' will be examined, including the New Ice Age, asteroid and comet impact, supervolcanoes, and mega-tsunami.

看完晚上做噩梦了T^T
不过对气候变化讲得还是比较透彻的。小行星和宇宙彗星，拜托去别处散步，地球不想撞见你们T^T

日子越来越难过了

文笔也很好
