Linguists and engineers in Natural Language Processing tend to use electronic corpora more and more. Most research has long been limited to raw (unannotated) texts or to tagged texts (annotated with parts of speech only), but these approaches suffer from a word by word perspective. A new line of research involves corpora with richer annotations such as clauses and major constituents, grammatical functions and dependency links. The first parsed corpora were the English Lancaster treebank and Penn Treebank. New ones have recently been developed for other languages.

This book:

provides a state of the art on work being done with parsed corpora;

gathers 21 papers on building and using parsed corpora raising many relevant questions;

deals with a variety of languages and a variety of corpora;

is for those working in linguistics, computational linguistics, natural language, syntax, and grammar.

书评

评论的标题虽然有些拗口，但说明这本书对于语言学家的重要性。关于统计自然语言处理，有这样一些名言： Fred Jelinek(1988): Every time I fire a linguist the performance of the recognizer improves. Roland Hausser(2003): If the Martians came to earth and modell...
