isbn:9780387243559

Web Information Systems is an indispensable textbook for anyone interested in the enhancement of technology components and Web-related topics. The text is based on material developed by the author, and has already been used in advanced graduate classes. Unlike other textbooks, Web Information Systems provides an analysis on multiple aspects of Web Information Systems (WIS), including common web programming technologies, WIS architecture, interoperability, performance, security, scalability and others. The book focuses on technological concerns, but also addresses advanced and theoretical issues. The text gives students skills for WIS development andandnbsp; prepares them for the future in an era of rapid technological advancement. With this effort, the author presents the most complete and up-to-date research for academic and professional students of WIS.
