Globalization, increased economic and geopolitical uncertainty, technology advancements, and a rise in the number of regulations and legislation, have led to a significant rise in the importance, volume, and complexity of modern contractual agreements. In spite of these profound changes, many organizations still manage the contracting process in a fractured, manual, and ad-hoc manner, resulting in poor contract visibility, ineffective monitoring and management contract compliance, and inadequate analysis of contract performance. This comprehensive volume addresses the questions surrounding Enterprise Contract Management (ECM) solutions, and the project and risk management considerations needed for successful implementation.
