出版时间:2004-7-17

装帧:Paperback

isbn:9780131429710

In this revision of a popular book, the best-selling author provides a new theme for the real-world engineering and scientific examples and problems used throughout the text. Solutions to the problems are developed using the language C and the author's signature five-step problem solving process. Since learning any new skill requires

practice at a number of different levels of difficulty, four types of exercises are presented to develop problem-solving skills - Practice! problems, Modify! problems, Short-Answer problems, and Programming problems. The author's clear and precise style creates a highly accessible and readable text for students of all levels.
