Precious metal clay (PMC) is an exciting new material for jewellers and other crafts people. It is as easy to manipulate as polymer clay but when it is fired, the resulting object is 99.9% solid silver - ideal for making earrings, pendants, rings and other small items. In this book, Tim McCreight describes this new material and explains how to work with it successfully. He provides answers to questions about forming, firing, finishing, stonesetting and findings. He also provides an imaginative set of projects each with clear step-by-step directions to show the wide range of possibilities this amazing new material provides.
