While the economic growth renaissance in sub-Saharan Africa is widely recognized, much less is known about progress in living conditions. This book comprehensively evaluates trends in living conditions in 16 major sub-Saharan African countries, corresponding to nearly 75% of the total population. A striking diversity of experience emerges. While monetary indicators improved in many countries, others are yet to succeed in channeling the benefits of economic growth into the pockets of the poor. Some countries experienced little economic growth, and saw little material progress for the poor. At the same time, the large majority of countries have made impressive progress in key non-monetary indicators of wellbeing.

Overall, the African growth renaissance earns two cheers, but not three. While gains in macroeconomic and political stability are real, they are also fragile. Growth on a per capita basis is much better than in the 1980s and 1990s, yet not rapid compared with other developing regions. Importantly from a pan-African perspective, key economies—particularly Kenya, Nigeria, and South Africa—are not among the better performers.

Looking forward, realistic expectations are required. The development process is, almost always, a long hard slog. Nevertheless, real and durable factors appear to be at play on the sub-continent with positive implications for growth and poverty reduction in future.

作者介绍:

Channing Arndt, Senior Research Fellow, World Institute for Development Economics Research, United Nations University; Andy McKay, Professor of Development Economics, University of Sussex; Finn Tarp, Chair, Development Economics, University of Copenhagen; Director, UN University World Institute for Development Economics Research (UNU-WIDER)

Channing Arndt has more than 20 years of experience in development economics with seven years combined resident experience in Morocco and Mozambique. He has published more than 55 articles in leading academic journals and has taken leadership roles in major policy documents such as the design of a carbon tax for the National Treasury of South Africa, the Economics of Adaptation to Climate Change for the World Bank, and the Second and Third National Poverty Assessments for the Government of Mozambique. His program of research has focused on agricultural development, poverty measurement, poverty alleviation and growth, market integration, gender and discrimination, the implications of the HIV/AIDS pandemic, technological change, trade policy, aid effectiveness, infrastructure investment, energy and biofuels, climate variability, and the implications of climate change.

Andy McKay is Professor of Development Economics at the University of Sussex where he teaches masters and PhD students in different fields of development economics. He has recently become managing editor of the *Review of Development Economics*; and is closely associated with the African Economic Research Consortium as a resource person and as co-coordinator of their collaborative project on the growth-poverty nexus in Sub-Saharan Africa. He was associate director of the Chronic Poverty Research Centre from 2005-2011; he recently obtained research grants for two projects looking at female labour supply in relation to poverty reduction, much of this in Sub-Saharan Africa.
