装帧:精装

isbn:9780871564900

From Booklist Gr. 4-7. Part of the noteworthy Sierra Club Wildlife Library, this well-written, informative, oversize introduction to snakes challenges many common misconceptions ("More than 75 percent are not poisonous"). Using comparisons ("Like us, snakes have bony skeletons"), the substantial text begins with a clear, precise definition of the term cold-blooded. It then moves on to anatomy, classification, hunting, and reproduction, and concludes with a look at the role these "slithering serpents" play in their ecosystems. The 40 attractive color photographs illustrate the diversity of which Grace, a Canadian zoologist, speaks. Engaging nonfiction. Julie Corsaro
