The joy of hanging baskets and containers is that you can put color exactly where you want. For a fuller splash of color, pack plants in their containers then position them around the garden to create highlights. Use window boxes to brighten sills, hang baskets either side of the front door to provide a welcome, or drape them

patio with potted shrubs. The easiest way to create impact is to plan coordinated.

schemes, often relying on bedding favorites. In addition, unusual and stunning visual arrangements can be easily achieved by ingeniously mixing different

types of containers with interesting plant combinations. To keep the color going

right throughout the year, you can replant containers with fresh shades for each new season as soon as plants have finished flowering. The eye-catching, color-themed planting suggestions illustrated in this book can be either copied as they are or used as inspiration for your own experiments with plant combinations and unlikely containers. Each chapter is devoted to a different color, offering plenty of planting ideas that span all the seasons. The chapter at the beginning of the book gives practical information on compost and planting as well as discusses ways of using a variety of containers or improving their appearance. A section at the end of the book provides the names of plants that can be used in place of many of the plants featured should these be unavailable in your area or if you prefer to experiment with alternative planting ideas.
