So now you own a boat. It may be your first boat or your fifth. It may be new or it may have had a previous owner who added equipment, kept everything lubricated and adjusted, and even turned over to you his hand-written notebook about adjustments, repairs and maintenance schedules. In any case, your boat is more complicated than a house, probably better made than a car--but nevertheless a mechanism with a lot of dials,

adjustments, and systems to take care of.

Charles F. Chapman, that redoubtable boat-owner and editor, had such strong ideas on this matter that he published a book: Practical Suggestions for Handling, Fitting Out and Caring for The Boat. The original cover, from 1918, appears on the facing page. Now, twenty million boats later, you own a boat. You probably already know that few boats come equipped with an owner's manual (but there may be a good engine manual, or good booklets about the water pressure system or the electronic communications equipment). And this book is a successor to that early book by Mr. Chapman, now brought right into the 1980's.
