The purpose of this study guide is to help the student identify and apply the key terms and

concepts in each chapter of the textbook. Each chapter in the study guide corresponds to the

chapter in the text with the same title and number.

Each chapter in this study guide begins with an overview of chapter content and with the

learning objectives and key terms identified in the textbook. The next section of each chapter

contains completion, short answer, and matching questions that will help the student identify and

use key terms and concepts. The section that follows consists of multiple-choice and true/false

questions to test critical thinking and application of concepts. In the final section of each

chapter, additional learning activities are suggested to help the student master content. The

answers to all questions are found at the end of the study guide.

This book is meant to be a companion book to Castiglia's Child Health Care: Process and

Practice. Used wisely, it will enhance the student's learning experience and understanding of the

care of children and families.
