The course of human civilization has turned on the outcome of a select few climactic battles throughout history, but never more so than when Stalin's enigmatic Soviet Union desperately rallied its resources to stave off Hitler's armies in the Battle for Moscow. From the drama in the command posts to the plight of the infantry and armor in the mud and snow, Seaton illuminates the titanic struggle that was the pivotal battle of WWII. --This text refers to an out of print or unavailable edition of this title.
