Preface
Reviewing the contents of this volume prepared during the spring and summer of 1991 the editors find vivid evidence that this has been an extraordinary year--for the world and for the world organization. For more than half a year the world's attention was focused on the tiny nation of Kuwait and on a drama of war and diplomacy unlike any we have seen before. Never had the U.N. Security Council--passing 12 resolutions in response to aggression and three more subsequent to a cease-fire--played such a major and visible role in resolving international conflict. And while we do not ignore the debate about the U.S. role within the Council few doubt the ground-breaking nature of the Council's actions during the crisis--actions that are likely to redefine U.N. peacekeeping. But the United Nations role in the Gulf war was by no means confined to peace and security issues. Since the very start of hostilities in August 1990--and to a far greater degree following the defeat of Iraq--nearly every organ of the vast U.N. system has been called upon to lend assistance in the region whether for the enormous humanitarian relief effort (WHO, UNDP, UNICEF, UNHCR) or the monitoring of Iraq's demilitarization (IAEA). Nor has the Gulf been the only theater of turmoil. Old wars and new continue to plague the community of nations and ethnic and factional conflicts are tearing at nations as disparate as El Salvador, Ethiopia, Indonesia, and India. Increasingly U.N. member states are looking to the world body to take an active role in the resolution of ostensibly "internal" matters, expanding the United Nations traditional mandate in ways that U.N. observers view with both hope and concern. Will the Organization be given the power and resources to undertake such challenges; will it successfully navigate the treacherous waters of national sovereignty; or will it be led to overreach itself and in so doing
