Introduction  
Appleton & Lange's Review for FLEX is a comprehensive signed to give you practice and feedback with clinical review resource with 1,000 FLEX-type multiple choice competence questions and PMPs respectively. In these questions and 13 patient management problems (PMPs) chapters in addition to supplementing your clinical review with referenced paragraph-length discussions of each answer you will also be practicing the technique of taking answer. In addition the last 250 questions and 3 PMPs have these complex and challenging methods of examination. been set aside as a Practice Test for self-assessment purpose. The fifth chapter is the Practice Test. poses. All of the sections in this book (except for the PMPs) are organized in the following order: ORGANIZATION OF THIS BOOK 1. Questions 2. Answers

explanations and references. 3. Bibliography This book is organized to cover sequentially each of the 4. Subspecialty list thirteen basic and clinical science areas specified by the Federation of State Medical Boards of the United States. These sections are discussed below in terms of what (the Federation). These areas are anatomy physiology they contain and how you can use them in the most effective manner. and behavioral sciences (basic sciences 300 questions total) and obstetrics and gynecology pediatrics internal Questions medicine surgery psychiatry and preventive medicine. Each section of this book contains only multiple-choice (clinical sciences 300 questions total). In addition the questions (or "items" in testing parlance). In general book contains a 150-question clinical competence review about 50 percent of these are "one best answer-single chapter" which is designed to assess your ability to use item questions 30 percent are "multiple true-false" your acquired medical knowledge to solve a variety of items 10 percent are "one best answer-matching sets" problems in the six clinical areas described above. The and 10 percent are "comparison/matching set" questions. fourth chapter of this book consists of 10 PMPs which are In some cases a group of two or three questions may be designed to test your abilities in a simulated clinical situation related to a situational theme. In addition some questions using the accompanying latent-image marker and have illustrative material (graphs x-rays tables) that booklet. The last chapter is a 250-question 3-PMP Practice Test which covers all of the areas in the earlier Moreover questions may be of three difficulty: review sections. (1) rote memory question (2) memo that requires understanding of the material presented in the first three chapters a question five chapters each of which is designed to maximize the information that requires understanding. In view of enhancing your review. The first two chapters are designed the fact that the Federation is designed to enable you to identify areas of weakness by discipline question and subspecialty in the basic sciences and clinical sciences it is the judgment: questions emphasis on the negative. Because all of the anatomy questions size throughout this text are followed by all of the physiology then stated in the negative. In such instances we have printed biochemistry etc. you can determine if you need to spend the negative word in capital letters (e.g. "All of the following are correct EXCEPT;" "Which of the following choices is NOT correct;" and which of the following is LEAST accurate oncology). The third and fourth chapters are de-correct".
